

**Take your productivity to the next level  
using IntelliJ IDEA and powerful utility tools**

Red Island, 8.5.2018.

Why utility tools?

—

**Skill is important as well as **tools!****

Da Vinci with a mop and a bucket of mud may be a better painter than you, but he would never beat Da Vinci with quality tools.

Complexity...

Complexity is the enemy of  
execution!

Simplify, simplify, simplify!  
Automate, automate, automate!

## Keyboard vs Mouse

Java IDE

# Why IntelliJ IDEA?

## Benefits of IntelliJ IDEA

### Staying in the flow

- by using **only keyboard**

### Powerful actions

- actions are **searchable**

### Code generation and refactoring

- a lot of options with **undo feature**

### Debugging

- changing values **on the fly**

### Plugins and built-in tools

- Git, Maven, Terminal, **Local History** etc.

# Powerful Actions

## How to measure and increase productivity?

Productivity Guide Help > Productivity Guide

IntelliJ IDEA uptime: 5 minutes, idle time: 4 minutes  
Code completion has saved you from typing at least 46.7K characters since 7.6.2017 (~371 per working day)  
Quick fixes have saved you from 626 possible bugs since 4.9.2017 (~7 per working day)

Feature	Group	Used	Last used ▲

## Navigation

Use **one step** solutions instead of manual navigation!

## Efficient file navigation

- Navigate to Class
  - *Ctrl + N*
- Navigate to file
  - *Ctrl + Shift + N*
- Navigate to symbols
  - *Ctrl + Shift + Alt + N*
- Find File
  - *Ctrl + Shift + F*
- Structural search (advanced)

## Structural search and replace!

The screenshot shows an IDE with a code editor and a structural search dialog. The code editor contains the following Java code:

```
3 public class ExampleClass
4 {
5     private int id;
6     private String firstName;
7     private String lastName;
8 }
9
10
11
12
13
14
15
16
17
18
19
20
21
22
23
24
25
26
27
28
29
30
```

The structural search dialog is titled "Structural Search - all fields of the class". It contains the following search template:

```
Search template:
class $Class$ {
    $FieldType$ $Field$ = $Init$;
}
```

Below the search template are four buttons: "Save Template...", "Edit Variables...", "History...", and "Existing Templates...".

The "Options" section includes:

- Recursive matching
- Case sensitive
- File type: Java Source
- Context: (empty)
- Dialect: None

The "Scope" section includes:

- Scope: Project Files
- Open in new tab

At the bottom of the dialog are buttons for "Find" and "Cancel", and a "Status:" label with a question mark icon.

**Code Generation**

## Code Generation

Generate code on almost each  
line you type - easy way!

## Generate a field from constructor parameter *Alt + Enter*

```
public class ExampleClass
{
    private int id;
    private String firstName;
    private String lastName;

    public ExampleClass(String firstName, int id, String newField)
    {
        this.id = id;
        this.firstName = firstName;
    }

    public int getId() { return id; }

    public String getFirstName() { return this.firstName; }

    public void setFirstName(String firstName)
    {
        this.firstName = firstName;
    }
}
```

## Live Templates

- OOTB templates:
  - *psvm*
  - *sout*
  - *iter* (foreach)
    - *itar* (arrays)
    - *ritar* (reverse, arrays)

```
import java.util.Arrays;

public class ExampleClass
{
    private int id;
    private String firstName;
    private String lastName;

    public ExampleClass(String firstName, int id)
    {
        this.id = id;
        this.firstName = firstName;
    }

    public int getId() { return id; }

    public String getFirstName() { return this.firstName; }

    public void setFirstName(String firstName)
    {
        this.firstName = firstName;
    }
}
```

# Live Templates Configuration

The screenshot shows the IntelliJ IDEA Settings dialog, specifically the 'Live Templates' configuration page. The left sidebar shows the 'Settings' tree with 'Live Templates' selected. The main area is titled 'Editor > Live Templates' and shows a list of templates under the 'Touch UI' category. The 'aem\_cq\_dialog\_with\_tab' template is selected and highlighted in blue. Below the list, the configuration for this template is shown, including its abbreviation, description, and template text. The 'Options' panel on the right shows the 'Expand with' dropdown set to 'Default (Tab)' and the 'Shorten EQ names' checkbox checked. Red arrows point from the 'aem\_cq\_dialog\_with\_tab' entry in the list to the 'Abbreviation' field and the 'Template text' area. The 'Edit variables' button is also visible.

**Refactoring**

## Refactoring

Basic refactoring while coding ensures much higher code quality!

## Extract Variable: *Ctrl + Alt + V*

```
public class ExampleClass
{
    private int id;
    private String firstName;
    private String lastName;

    public static void main(String[] args)
    {
        // always extract variable using Ctrl + Alt + V
    }

    public ExampleClass(String firstName, int id)
    {
        this.id = id;
        this.firstName = firstName;
    }

    public int getId() { return id; }

    public String getFirstName() { return this.firstName; }

    public void setFirstName(String firstName) { this.firstName = firstName; }
}
```

## Extract Method: *Ctrl + Alt + M*

```
public class ExampleClass
{
    private int id;
    private String firstName;
    private String lastName;
    private String shortcut;

    public static void main(String[] args)
    {
        // extract method using Ctrl + Alt + M - should be used very often to ensure that methods are small! :)
    }

    public ExampleClass(String firstName, int id)
    {
        this.id = id;
        this.firstName = firstName;
    }

    public int getId() { return id; }

    public String getFirstName() { return this.firstName; }

    public void setFirstName(String firstName) { this.firstName = firstName; }
}
```

What is your first reaction when you hear word “Regex”?

**COMMON**

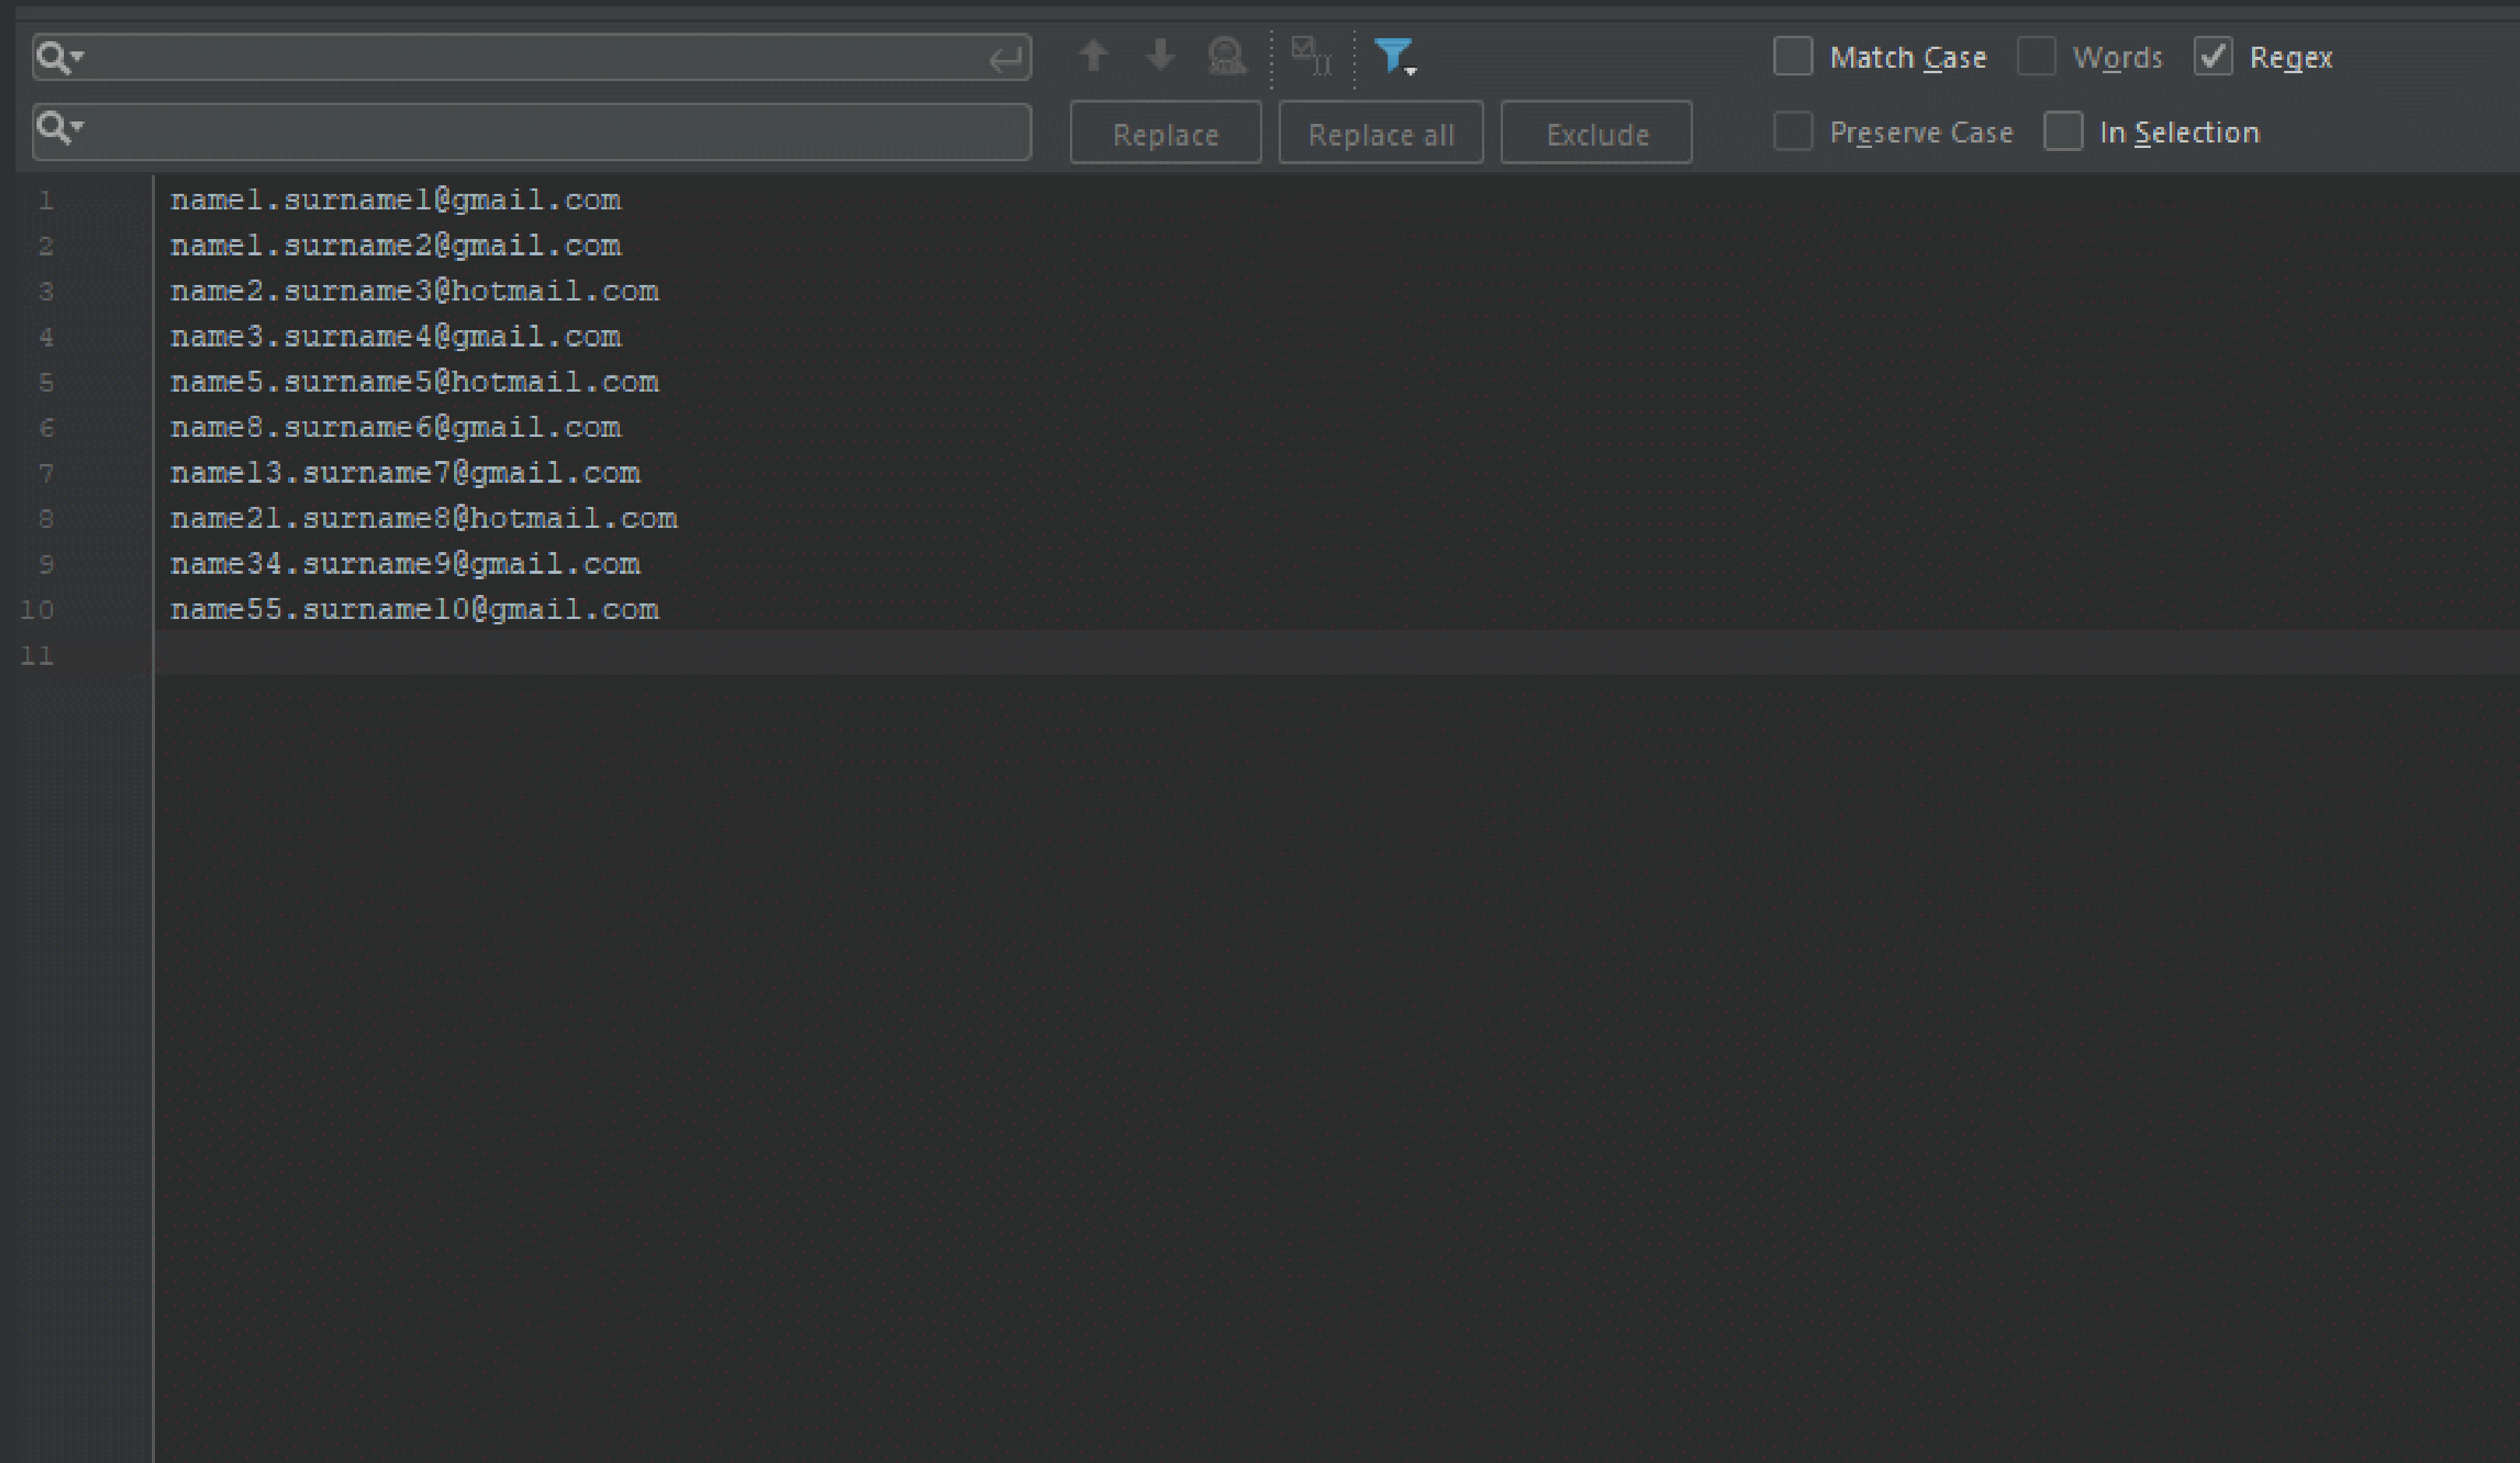

**SEIZE THE REGEX POWER!**

## Simple Regex Usage with Preview

The screenshot shows a search and replace interface in a text editor. At the top, there are two search input fields, both containing a magnifying glass icon. To the right of the first search field are navigation icons (up, down, search, replace, filter) and checkboxes for  Match Case,  Words, and  Regex. Below the search fields are buttons for , , and . To the right of these buttons are checkboxes for  Preserve Case and  In Selection. The main text area contains a list of email addresses, each on a new line, with line numbers 1 through 11 on the left. The email addresses are: name1.surname1@gmail.com, name1.surname2@gmail.com, name2.surname3@hotmail.com, name3.surname4@gmail.com, name5.surname5@hotmail.com, name8.surname6@gmail.com, name13.surname7@gmail.com, name21.surname8@hotmail.com, name34.surname9@gmail.com, and name55.surname10@gmail.com.

# HIDDEN IN PLAIN SIGHT - MULTICURSORS

## Advanced Feature: Multicursors *Alt + Shift + Left click*

```
public class EnumMulticursor {  
    // refactoring multiple arrays into enum  
    private String[] possibleStrings = new String[] { "value1", "value2", "value3", "value4", "value5" }  
    private int[] possibleSValues = new int[] { 12345, 23456, 34567, 456789, 5678910 };  
}
```

## Debugging: Code Coverage

The screenshot displays the IntelliJ IDEA IDE with a Java test class and its execution results. The code editor shows the following Java code:

```
2
3 import org.junit.Test;
4
5 import static org.hamcrest.CoreMatchers.is;
6 import static org.junit.Assert.assertThat;
7
8 public class ExampleClassTest
9 {
10
11     @Test
12     public void test_formatText()
13     {
14         //given
15         ExampleClass exampleClass = new ExampleClass( firstName: "Checking code coverage");
16
17         //when
18         String formattedString = exampleClass.formatText( suffix: " :");
19
20         //then
21         assertThat(formattedString, is( value: "Checking code coverage is easy! :)"));
22     }
23 }
```

The IDE interface shows the test execution results in the bottom panel:

- Run: ExampleClassTest x
- Tests passed: 1 of 1 test - 14 ms
- ExampleClassTest (javacro) 14 ms
- test\_formatText 14 ms

The output window shows the following text:

```
"C:\Program Files\Java\jdk1.8.0_131\bin\java" ...
---- IntelliJ IDEA coverage runner ----
sampling ...
include patterns:
javacro\..*
exclude patterns:
Process finished with exit code 0
```

- Git Integration
- Language Injection
- Terminal

# Compare with Clipboard

The screenshot shows an IDE window with the following menu items: File, Edit, View, Navigate, Code, Analyze, Refactor, Build, Run, Tools, VCS, Window, Help. The breadcrumb path is: complete > src > main > java > javacro > ExampleClass. The code editor displays the following Java code:

```
1 package javacro;
2
3 public class ExampleClass
4 {
5     private int id;
6     private String firstName;
7     private String lastName;
8
9     public ExampleClass(String firstName, int id)
10    {
11        this.id = id;
12        this.firstName = firstName;
13    }
14
15    public int getId()
16    {
17        return id;
18    }
19
20    public String getFirstName()
21    {
22        return this.firstName;
23    }
24
25    public void setFirstName(String firstName)
26    {
27        this.firstName = firstName;
28    }
29
30 }
31
```

A comparison tool overlay is visible on the right side of the code editor, showing a diff between the current code and a version from the clipboard. The diff highlights the following changes:

- Line 5: `private int id;` (added)
- Line 6: `private String firstName;` (added)
- Line 7: `private String lastName;` (added)
- Line 9: `public ExampleClass(String firstName, int id)` (added)
- Line 11: `this.id = id;` (added)
- Line 12: `this.firstName = firstName;` (added)
- Line 15: `public int getId()` (added)
- Line 17: `return id;` (added)
- Line 20: `public String getFirstName()` (added)
- Line 22: `return this.firstName;` (added)
- Line 25: `public void setFirstName(String firstName)` (added)
- Line 27: `this.firstName = firstName;` (added)

## Compare with Clipboard

```
Clipboard vs Editor

20    {
21        return this.firstName;
22    }
23
24    public void setFirstName(String firstName)
25    {
26        this.firstName = firstName;
27    }
28
29 }
30
```

# Local History: Differences

The screenshot displays the IntelliJ IDEA Local History tool. On the left, a list of history entries is shown, with a context menu open over the entry "Changing class(String) of class javacro.ExampleClass". The main area shows a side-by-side comparison of the file "ExampleClass.java" from "10 minutes ago" (Read-only) and the "Current" version. The differences are highlighted in green and red. A red box highlights the navigation arrows in the diff view.

**Local History List:**

- Last 12 Hours
- 7 minutes ago - 1 file: ExampleClass.java
- 7 minutes ago - 1 file: ExampleClass.java

```

4 differences

## Language Injection *Alt + Enter*

```
public String createHtml()  
{  
    String html = "";  
    return html;  
}  
  
public String formatText(String suffix)  
{  
    String formattedString = formatString(prefix, getString());  
    return formattedString + suffix;  
}  
  
private static String formatString(String prefix, String initalString)  
{  
    String formattedString = prefix + " " + initalString + "!";  
    return formattedString;  
}  
  
private static String getString()  
{  
    }
```

ExampleClass > createHtml()

# Notes & Sharing

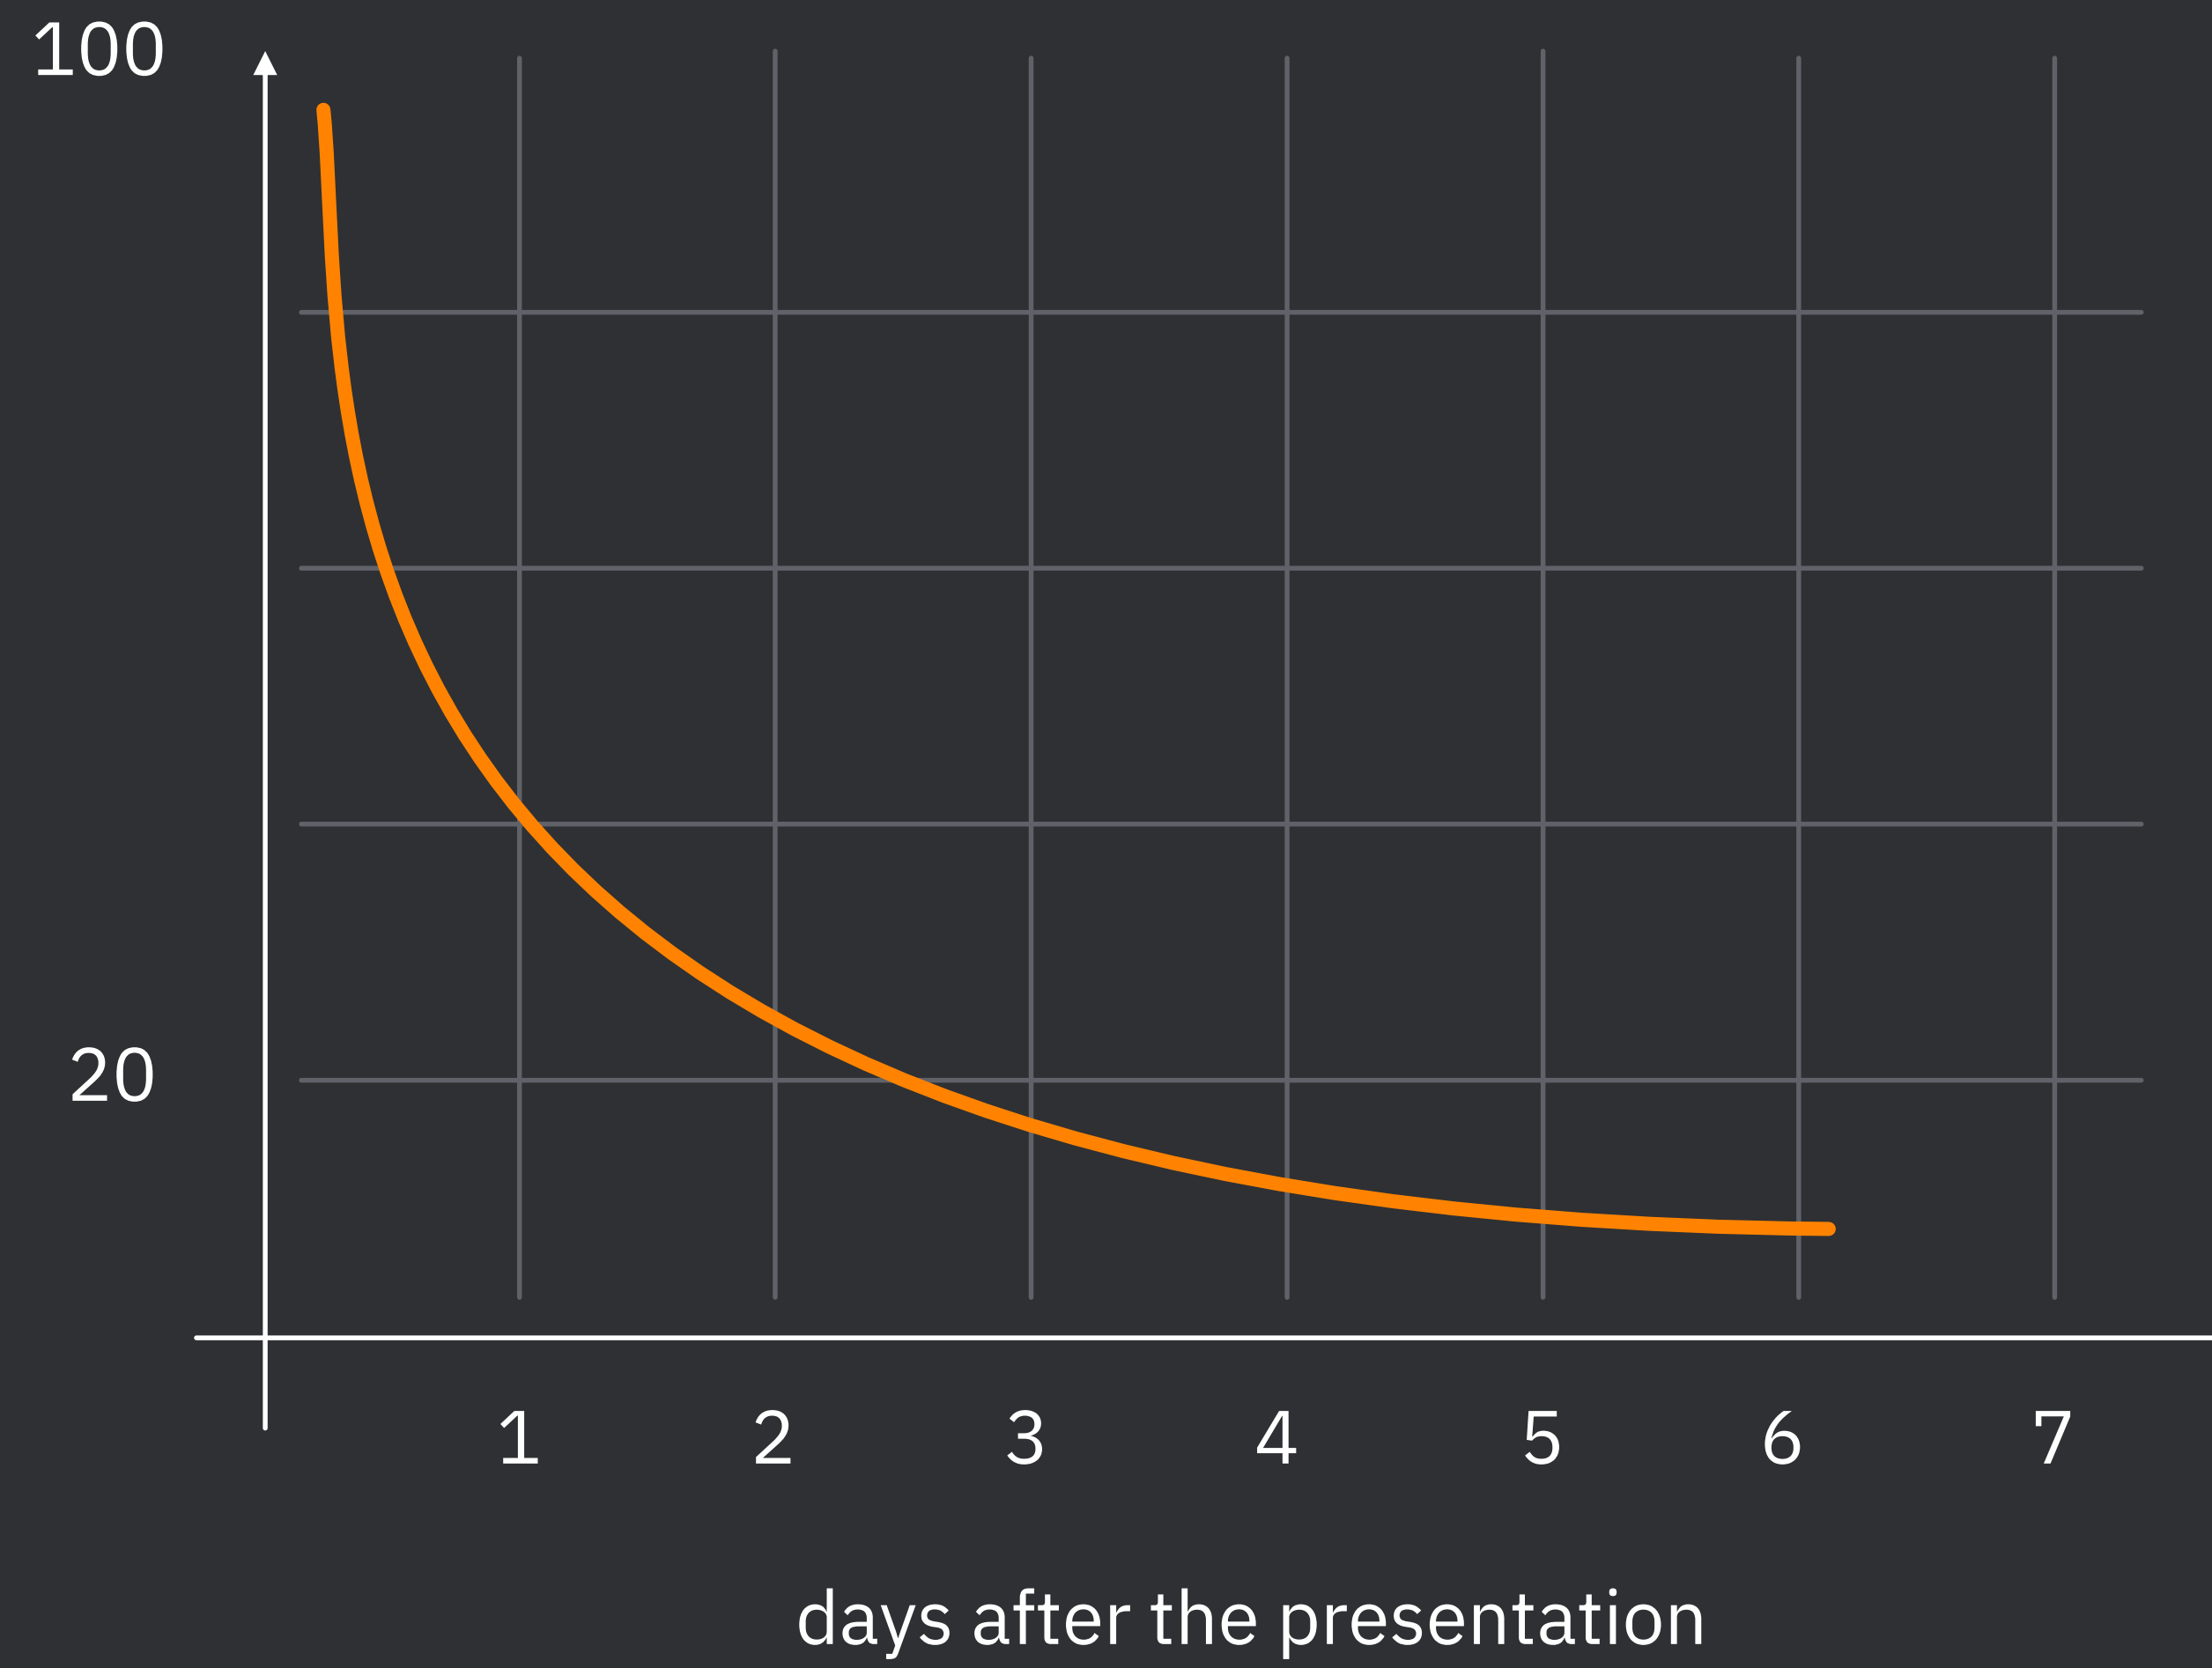

Notes & Sharing

How often do you take notes?

## The forgetting Curve.

## OneNote Features

- Search (even in screenshots)
- Cloud storage option
- Code highlighting (Highlight plugin)
- Shortcuts for reorganization, *Alt + Shift + Up or Down*

# OneNote: notebooks, sections, pages, content

The screenshot displays the Microsoft OneNote interface. At the top, the title bar reads "GUI Components: Classic, Granite, Coral (/libs) - OneNote". The ribbon includes tabs for File, Home, Insert, Draw, History, Review, View, and NoteHighlight. The Home tab is active, showing options for Clipboard, Basic Text, Styles, Tags, and Meetings. The left sidebar shows a list of notebooks: Ecx.io, Personal Development, Spring, Management, and Windows. The current notebook is "Ecx.io", and the selected section is "AEM". The page title is "GUI Components: Classic, Granite, Coral (/libs)", dated Wednesday, July 19, 2017, at 3:18 PM. The content includes a bulleted list:

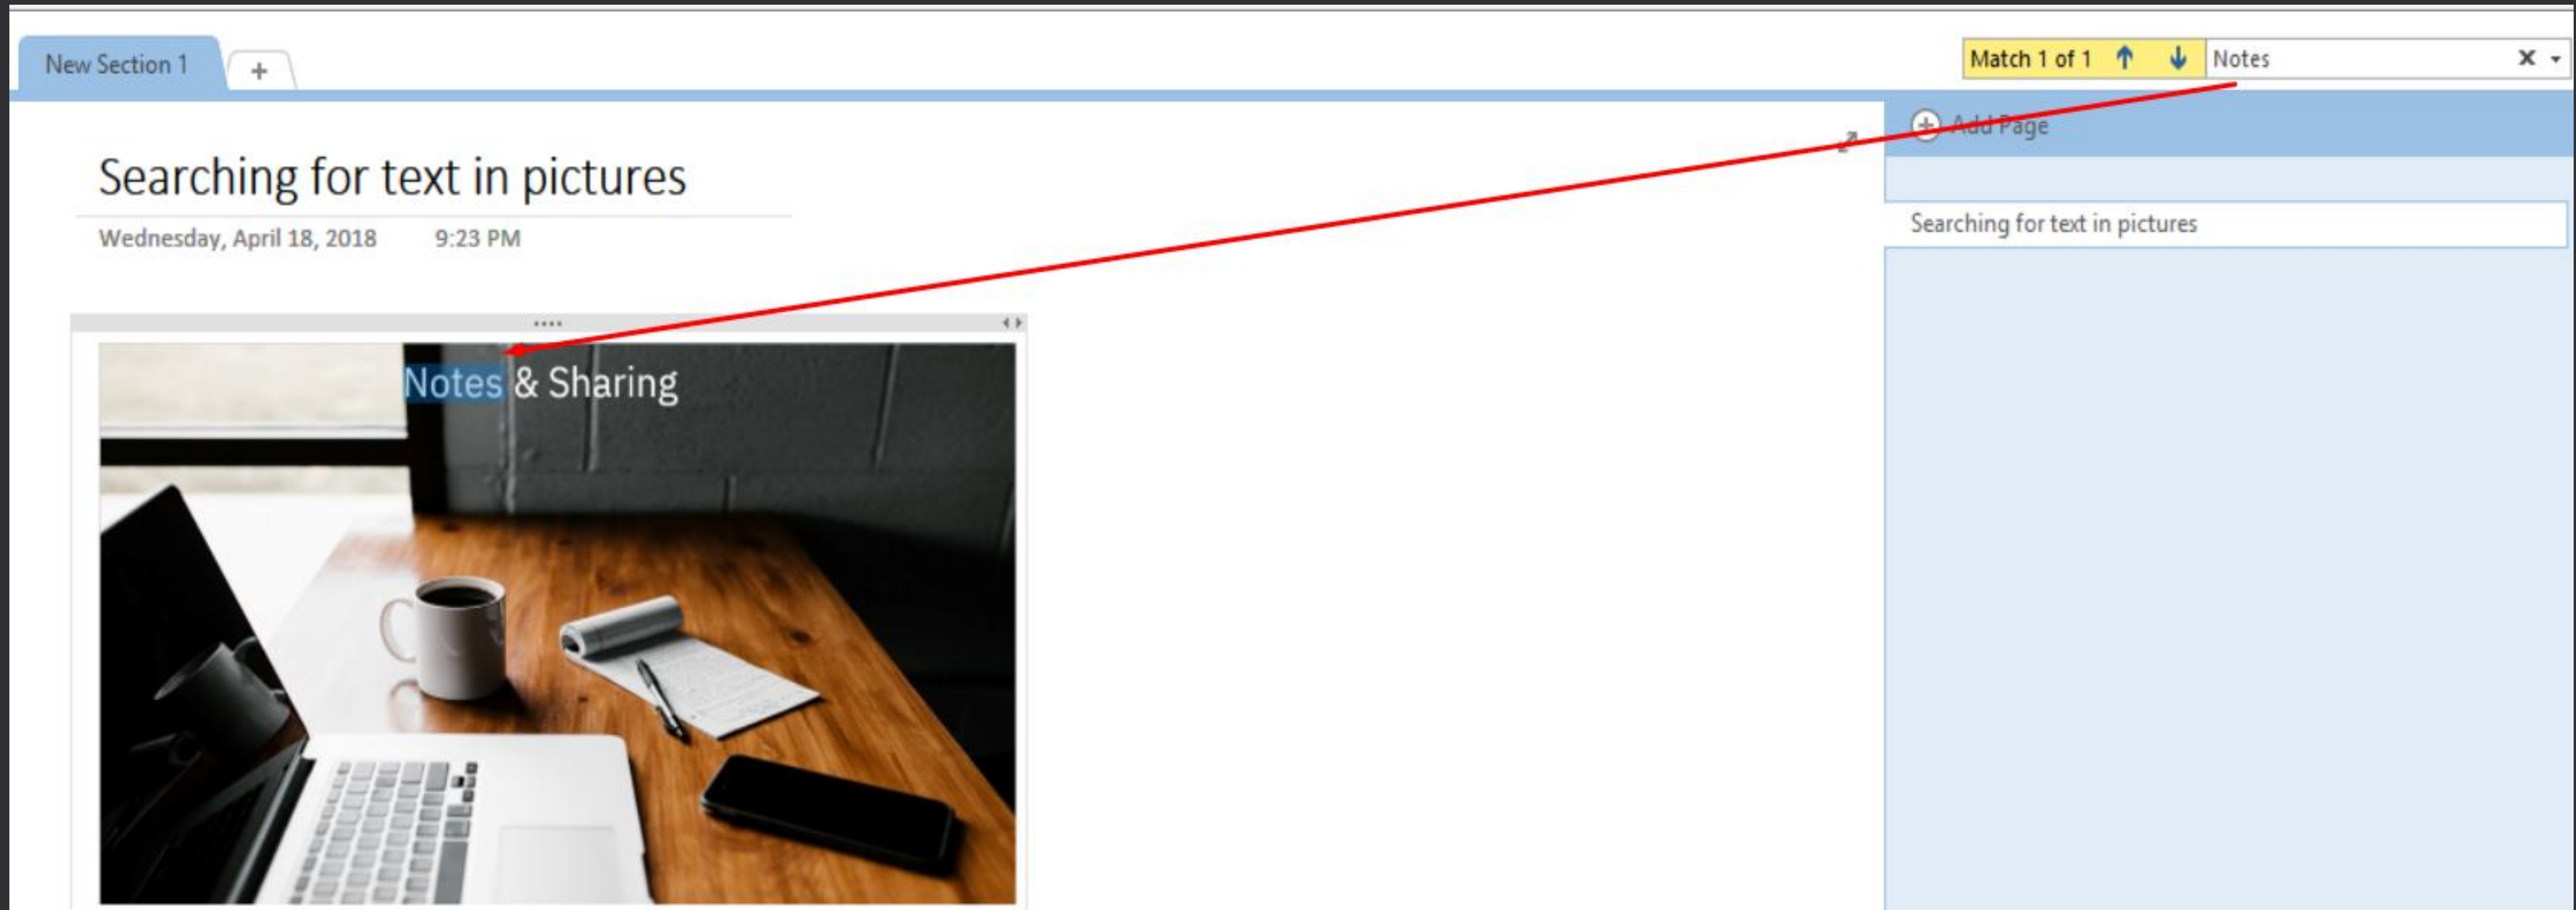

- Coral UI
  - <https://docs.adobe.com/docs/en/aem/6-3/develop/ref/coral-ui/coralui3/Coral.Select.html>
- Classic UI and Touch UI
  - Classic UI: old UI, before AEM 6.0, uses EXTJS framework
  - Touch UI: Coral UI Framework + Granite UI Foundation framework

Below the text is a diagram illustrating the relationship between AEM, Granite, and Coral UI. AEM is shown at the top, with arrows pointing to Granite and Coral UI. Granite contains Granite UI, which is linked to granite:components (content driven components). Coral UI contains a Utility Library (glue / plumbing) and Widgets (higher level UI building blocks).

On the right side, the "Add Page" pane is open, showing a list of pages including "GUI Components: Classic, Granite, Coral (/libs)", "Components (/apps)", "Dialogs and Design Dialogs", "Templates", "OSGi Components", "OSGi Services", "Sling Models", "Sling Servlets", "ClientLibs: CSS + Javascript", "Sightly HTL", "Sightly HTL Snippets", "Building Blocks Specific", "I18n", "AEM Workflows", "Sling Events", "Error Handling", "Configuration and other", "Permissions", "Debugging", "Run Modes", "Configuration", "Node Types", "Logging", "Best practices", "Testing", "AEM 6.3 Core Components", and "Sort Backend API".

**Questions?**

**Backup slides**

## Navigation WITHIN file: moving over errors **F2**

```
public class ExampleClass
{
    private int id;
    private String firstName;
    private String lastName;

    public ExampleClass(String firstName, int id)
    {
        this.id = id;
        thi.firstName = firstName;
    }

    public int getId() { return id; }

    public String getFirstName() { return this.fi; }

    public void setFirstName(String f
    {
        this.firstName = firstName;
    }
}
```

Cannot resolve symbol 'fi'

## Navigation WITHIN file: navigate to class member **Ctrl + F12**

The image shows a code editor on the left and a search results panel on the right. The code editor contains the following Java code:

```
public class ExampleClass
{
    private int id;
    private String firstName;
    private String lastName;

    public ExampleClass(String firstName, int id)
    {
        this.id = id;
        this.firstName = firstName;
    }

    public int getId() { return id; }

    public String getFirstName() { return this.firstName; }

    public void setFirstName(String firstName)
    {
        this.firstName = firstName;
    }
}
```

The search results panel, titled "Search for: g" and "ExampleClass.java", shows the following members:

- Inherited members (Ctrl+F12)
- Anonymous Classes (Ctrl+I)
- Lambdas (Ctrl+L)
- ExampleClass
  - ExampleClass(String, int)
  - getFirstName(): String
  - getId(): int
  - setFirstName(String): void
  - firstName: String
  - lastName: String

Red arrows indicate the navigation path: from the search results to the code editor. One arrow points from the search bar to the search results. Another arrow points from the search results to the code editor. A third arrow points from the search results to the code editor. A fourth arrow points from the search results to the code editor.

## Navigation WITHIN file: moving between methods *Alt + Up* or *Down*

```
public class ExampleClass
{
    private int id;
    private String firstName;
    private String lastName;

    public ExampleClass(String firstName, int id)
    {
        this.id = id;
        this.firstName = firstName;
    }

    public int getId() { return id; }

    public String getFirstName() { return this.firstName; }

    public void setFirstName(String firstName)
    {
        this.firstName = firstName;
    }
}
```

## Find file *Ctrl + Shift + F*

The image shows an IDE interface with a search window open. The search window is titled "Find in Path" and has the following options:  Match case,  Words,  Regex?, and  File masks. The search term is "Example" and it shows "2 matches in 1 file". The search results are:

- public class ExampleClass ExampleClass.java 3
- public ExampleClass(String firstName, int id) ExampleClass.java 9

Red arrows point from the search results to the corresponding code in the editor. The editor shows the following code:

```
package javacro;

public class ExampleClass
{
    private int id;
    private String firstName;
    private String lastName;

    public ExampleClass(String firstName, int id)
    {
        this.id = id;
        this.firstName = firstName;
    }

    public int getId() { return id; }

    public String getFirstName() { return this.firstName; }

    public void setFirstName(String firstName)
    {
        this.firstName = firstName;
    }
}
```

## Extract Parameter: *Ctrl + Alt + P*

```
public class ExampleClass
{
    private int id;
    private String firstName;
    private String lastName;
    private String shortcut;

    public static void main(String[] args)
    {
        // 2 same method calls
    }

    public ExampleClass(String firstName, int id)
    {
        this.id = id;
        this.firstName = firstName;
    }

    public int getId() { return id; }

    public String getFirstName() { return this.firstName; }

    public void setFirstName(String firstName) { this.firstName = firstName; }
}
```

## Extract Field: *Ctrl + Alt + F*

```
public class ExampleClass
{
    private int id;
    private String firstName;
    private String lastName;
    private String shortcut;

    public static void main(String[] args)
    {
        // extract field using Ctrl + Alt + F
        DemoEnum demoEnum = DemoEnum.VALUE_1;
        String message = "Always extract variable using";
        String shortcut = "Ctrl + Alt + V";
        String separator = "";
        String importantMessage = message + separator + shortcut;
        System.out.println(importantMessage);
    }

    public ExampleClass(String firstName, int id)
    {
        this.id = id;
        this.firstName = firstName;
    }

    public int getId() { return id; }

    public String getFirstName() { return this.firstName; }

    public void setFirstName(String firstName) { this.firstName = firstName; }
}
```

## Questions for continuous improvement

- Can the number of **mouse clicks** and **keyboard presses** be reduced even more?
- Has someone already developed a simple solution for our problem?
